

Indiana Crop Weather

Increased Rain, Cooler Temperatures

With harvest on the horizon, early- and late-week rains helped replenish soil moisture levels and improve crop conditions, according to Nathaniel Warenski, State Statistician, USDA NASS, Indiana Field Office. Soil moisture levels increased from the previous week, with 64 percent of topsoil moisture reported as adequate or surplus.

The average temperature for the week was 70.4 degrees Fahrenheit, 0.3 degrees below normal for the State. The amount of rainfall varied from none to 4.06 inches over the week. The statewide average precipitation was 1.29 inches. There were 5.7 days suitable for fieldwork for the week ending September 5.

Corn and soybean conditions improved slightly from the previous week, thanks in part to the above average rainfall throughout much of the State. Corn dented progressed well ahead of the five-year average, while corn mature was slightly behind schedule at 15 percent. Soybeans progressed ahead of the five-year average with 18 percent dropping leaves. Silage harvest was underway, running slightly behind the previous year at 30 percent complete. The mid-week break in the rain allowed for hay harvest in some areas, as the third and fourth cuttings of alfalfa progressed ahead of the five-year averages. Armyworms were reported as a concern in hay and pasture fields throughout the State. Livestock were reported in good condition. Other activities for the week included applying insecticides, processing livestock, and preparing equipment for harvest.

Soil Moisture: Week Ending 09/05/21				
Item	Very short	Short	Adequate	Surplus
	(percent)	(percent)	(percent)	(percent)
